Introduction

This manual provides an overview of the requirements of operating a public spa; public spa requirements are detailed in the Ontario Regulation 565 - Public pools.

It is the responsibility of every owner and operator of a spa to maintain the spa and its equipment in a safe and sanitary condition. Compliance with relevant legislation and operating standards ensures that patrons can safely use the spa.

Ontario Regulation 565 - Public pools, made under the Health Protection and Promotion Act, sets out the following general responsibilities of spa operators:

- maintain the public spa and its equipment in a safe and sanitary condition
- ensure that all components of the public spa and its equipment are maintained in proper working order
- ensure that all emergency equipment required by this Regulation is maintained in proper working order
- ensure that all surfaces of the public spa deck and walls are maintained in a sanitary condition and free from potential hazards
- ensure that carpeting or other water-retentive material is not installed or used in any area that becomes or may become wet during the daily use period
- if they are provided, ensure that dressing rooms, water closets and shower facilities are available for use of the bathers before entering the deck, and maintained in a sanitary condition and free from potential hazards
- ensure that no person brings a glass container onto the deck or into the public spa
- ensure that no food or beverage except water is supplied or consumed in the public spa or on the deck
- ensure that the spa is rendered inaccessible to persons when not in use
- ensure the safe storage and handling of chemicals

The Regulation requires that spa owners/operators be trained in spa operation and maintenance, filtration systems, water chemistry, and relevant safety and emergency procedures.

Disclaimer:

This document is provided for educational use and is not a complete or exact reproduction of the legislation. It is not intended to be used as legal advice about the legislation. Where there is a discrepancy, the legislation prevails. Both this manual and the Regulation do not address pool problems associated with unbalanced water chemistry, equipment, and maintenance or construction requirements. For problems associated with equipment maintenance and unbalanced water chemistry, contact a local swimming pool/spa company or your equipment manufacturer. Requirements related to spa construction are set out in the Ontario Building Code, please contact your local municipal office and ask for a building inspector for issues arise regarding construction.

Definition of a spa (Section 1)

A “public spa” means:

- A hydro massage pool containing an artificial body of water that is intended primarily for therapeutic or recreational use that is not drained, cleaned or refilled before use by each individual AND that utilizes:
  - hydrojet circulation
  - air induction bubbles
  - current flow OR
  - a combination of these over the majority of the pool

Spa regulations apply to:

- apartment buildings (that contain more than five dwelling units or suites); and mobile home parks
- facilities that serve a community of more than five single family private residences for the use of the residents and their visitors
- hotels
- campgrounds for the use of campground tenants and their visitors
- spas that are part of: i) a club or ii) a condominium, co-operative or commune property
- as part of a child care, a day camp or an establishment or facility for the care or treatment of persons who have special needs

Requirement to notify Public Health of public spa opening/re-opening (Section 5)

All public spa owner/operators must notify Public Health in writing, 14 days before a public spa is put into use.

Written permission from Public Health must be obtained before opening after construction or alterations.

The following information must be provided at least 14 days prior to the intended date of opening/reopening:

1. Facility name and address
2. Owner and/or designated operator name, home address and phone number
3. Intended opening or re-opening date
4. Building Permit number (applicable for new construction or alteration)

See Appendix A for a Spa opening notification form. Submit the form when all preparations necessary to operate in accordance with the regulation have been completed.
Spa safety/operation

General operation requirements
(Sections 6, 10, 11, 19.1-26)

Every owner and every operator shall ensure that the spa, deck and where provided, the dressing and locker rooms, toilets, showers and connecting corridors are maintained:

- in a sanitary condition
- free of potential hazards
- that no food or beverage except water is supplied or consumed in the spa or on the deck
- that no glass container is brought onto the deck or into the spa

Required safety fixtures (Sections 16 and 20 to 26)

| **Emergency stop button** | • located within the immediate vicinity of the spa  
|                          | • deactivates all spa pumps  
|                          | • separate from the spa’s timing device  
|                          | • activates an audible and visual signal  
|                          | • tested once a month and recorded |
| **Emergency telephone**  | • a land line  
|                          | • within 30 metres of the public spa  
|                          | • connects directly to:  
|                          | ° A) an emergency service or  
|                          | ° B) the local telephone utility  
|                          | • to be fully operational, and tested each day before opening and recorded |
| **First aid kit**        | • conveniently located and well marked  
|                          | • must contain the following:  
|                          | ° current copy of a standard first aid manual  
|                          | ° safety pins  
|                          | ° adhesive dressings, individually wrapped  
|                          | ° sterile gauze pads, each 7.5 cm square  
|                          | ° rolls of gauze bandages 5 cm in width  
|                          | ° rolls of gauze bandages 10 cm in width  
|                          | ° sterile surgical pads suitable for pressure dressings, individually wrapped  
|                          | ° triangular bandages  
|                          | ° rolls of splint padding  
|                          | ° at least one roll up splint  
|                          | ° at least one pair of scissors  
|                          | ° non-permeable gloves  
|                          | ° resuscitation pocket mask |
| **Ground fault detector**| • required if spa has underwater lights or electrical outlets within 3 metres of the pool surface  
|                          | • activated during the daily use period  
|                          | • tested either monthly or according to manufacturer’s instructions, whichever is more frequent |
### Required safety fixtures continued

| Tamper proof upper limit temperature cut-off switch | • limits the maximum temperature of the spa water to 40° C (104° F)  
| | • independent of the spa’s water temperature thermostat |
| **Timing device** | • controls the operation of the jet pump  
| | • can be set to a maximum of 15 minutes  
| | • requires a bather to exit the spa to reset it |
| **Suction system** | • must have one or more of the following:  
| | ° a vacuum release system  
| | ° a vacuum limit system  
| | ° another engineered system designed, constructed and installed to conform to good engineering practice appropriate to the circumstances  
| | ° tested once a month and recorded  
| | ° see Appendix B – Spa parts |
| **Clock** | • located so that it can be viewed from anywhere in the public spa |
| **Steps** | • equipped with a handrail  
| | • non slip surface on the treads  
| | • a band of contrasting colour on side and top edges |

In addition to the above, when the spa has a diameter or width of more than three metres, you also need:

| **Reaching pole** | • 3.65 m long, electrically insulated or non-conducting  
| | • available on deck |
| **Buoyant throwing aid** | • securely attached to a rope that is 6mm in diameter  
| | • rope length to be 3 m plus half the width of the spa  
| | • available on deck |
| **Spine board** | • device designed for lifting from the pool a person who may have incurred a spinal injury  
| | • to be in good condition and on deck |
Handling and storage of chemicals
(Sections 6, 11, 13)

Chemicals are necessary to support a sanitary spa. When used, stored and handled properly, chemical products can be both safe and effective. Failure to understand the hazards of chemical products can lead to damage and injuries. It is important to:

- Train staff on the importance of handling chemicals safely
- Follow manufacturer’s recommendations
- Store in a cool, dry and well-ventilated space
- Keep corrosive materials such as metals and combustibles such as paper and rags away from other chemicals
- Keep all chemicals away from hot surfaces and flame
- Wear appropriate personal protective equipment and clothing (gloves, respirators, apron, footwear etc.)
- Keep Material safety data sheets (MSDS) available to employees for every chemical in use
- Do not eat, drink or smoke in the chemical storage area
- Ensure the chemical storage room is inaccessible to unauthorized persons
- Handle chemicals with clean, dry scoops only. Each chemical should have its own scoop. Use scoops provided by the manufacturer
- Store chemical in original containers and keep containers closed when chemicals are not in use
- Never re-use empty chlorine containers for storage of other chemicals and never mix contaminated chemicals with your fresh supply
- Cover all chlorine cylinder containers with a valve protection hood except the ones in use
- Ensure chlorine cylinders are anchored at all times
- When mixing chemicals, add them slowly. Never add water to the chemicals, always add the chemical to the water (unless explicitly instructed to do so on the container label)

See also the Centers for Disease Control and Prevention Pool Chemical Safety Factsheet.

Record keeping (Section 8)

Ontario Regulation 565 requires that every operator keep and sign daily records. The daily record shall be retained for a period of one year from the date of making the record and shall be available for viewing by the Medical Officer of Health or a Public Health Inspector at any time. The Regulation requires that every operator keep and sign a daily record that sets out, in relation to an operating day:

- the free available chlorine AND total chlorine residuals
- total bromine residual if the pool uses bromine instead of chlorine
- the pH value of the spa water
- the total alkalinity of the spa water
- the clarity of the pool
- emergency telephone operation
- the total number of bathers admitted to the spa each day
- the reading of the make-up water meter
- any emergencies, rescues or breakdowns of equipment that have occurred
- the time of day that the actions required under subsection 16 (2) have been taken
- the type and amount of chemicals added manually to the public spa
- the results of all inspections and tests required and the times they were performed
- the time of day that the emergency stop button test was performed
- whether the public spa was drained, inspected and refilled

See Appendix C for sample record keeping logs, and Appendix D for pool and spa incident form.
Notices, signage and markings
(Section 19)
The following signs must be posted in the spa area:

1. Caution notice
2. Shower sign
3. Emergency telephone
4. Emergency stop
5. Timing device
6. Exemption
7. Water depth markings

1. Caution notice
The following notice must be posted at each entrance to the spa with the word CAUTION in letters not less than 50 millimetres high and all other lettering not less than 10 millimetres high with a five millimetre stroke. This information can be found in Section 19.1(1) of Ont. Reg. 565.

CAUTION

Children under the age of 12 are not allowed in the spa unless supervised by a person who is 16 years of age or older.

Pregnant women and persons with known health or medical conditions should consult with a physician before using a spa.

Do not use the spa if you have an open sore or rash, or are experiencing nausea, vomiting or diarrhea.

Overexposure may cause fainting. 10 to 15 minutes may be excessive for some individuals. Cool down periodically and leave the spa if nausea or dizziness occurs.

Enter and exit the spa slowly, to prevent slipping.

Do not play or swim near drains or suction devices. Your body, body parts, hair, jewelry and other objects may become trapped and cause injury or drowning. People with long hair should be especially careful.

Do not enter or remain in a spa if a drain cover or suction fitting is loose, broken or missing. Immediately notify the spa operator.

No food or beverage except water is permitted within the deck or spa. No glass containers of any kind are permitted within the deck or spa.

Maximum bather capacity of a public spa is ____________________________.
2. Shower sign
The following notice (recommend to be in letters 25 millimetres or higher with a minimum five millimetre stroke) is to be posted at every entrance to the spa deck. This information can be found in Section 19 of Ont. Reg. 565.

3. Emergency telephone
A notice identifying the location of the emergency telephone, in letters not less than 25 millimetres high with a minimum 5 millimetre stroke, in a conspicuous location near the entrance to the public spa.

A notice must be posted at the phone identifying it as the emergency telephone

Emergency telephone procedure
A notice at the emergency telephone:
• to call 911 for emergency services
• the full name and address of the public pool and all of the pools’ emergency telephone numbers

4. Emergency stop
The following sign must be posted above the emergency stop button, in letters at least 25 millimetres high with a minimum five millimetre stroke. This information can be found in Section 14 of Ont. Reg. 565.

5. Timing device
A notice must be posted at the timing device; in letters at least 25 millimetres high with a minimum five millimetre stroke, is posted at the timing device that identifies it as a timing device.

6. Exemption notice
For a public spa on the premise of a hotel that contains five or fewer units or suites for the use of its guests and their visitors the following notice must be displayed within the public spa enclosure, printed in letters at least 25 millimetres high with a minimum five millimetre stroke. This information can be found in Section 4.1 of Ont. Reg. 565.

7. Water depth markings
When the depth of a spa is the same throughout, depth markings of the actual depth should be provided at either end.

When the spa has a diameter or width of more than three metres, depth markings are needed in letters of at least 10 millimeters high. Markings that set out the water depths on the deck need to indicate:
• deep points where the water depth exceeds 2.5 metres
• break points between shallow and deep areas
• breaks between gentle and steep bottom slopes
• DEEP AREA and SHALLOW AREA at their respective locations
Calculations

The following formulas can be used to calculate the surface area of the spa and bather load. See Appendix E for a conversion chart.

**Maximum bather load**
The maximum bather load is the lower number of:

a) The manufacturer of the spa AND
b) One person for every square metre of water.

**How do I calculate the area of the spa water surface?**

Determine the shape of the spa

a) Square or rectangular:
   
   Length = _______ metres  
   Width = _______ metres  
   Area of spa water surface = Length x Width  
   _______ metres x _______ metres = _______ square metres  

b) Circle:
   
   Radius = 1/2 x diameter  
   1/2 x _______ metres = _______ metres  
   Area of spa water surface = _______ x radius x radius  
   3.14 x _______ metres x _______ metres = _______ square metres  

**Calculating bather load**
The total number of bathers permitted in your spa is identified by the manufacturer of the spa or complete the following calculation:

Maximum bather load = for every square metre of water, one bather is permitted

_______ square metres x one bather = _______ bathers  

For example if there are seven square metres of water, only seven bathers are permitted. Therefore the bather load would be seven.
3) Determine the flow meter reading
A flow meter is required to determine if the correct turnover period is achieved. See Appendix B – Spa parts.

When the volume (as calculated above):

**a) Exceeds than 6m³**

Flow meter reading = \( \frac{\text{volume in m}^3 \times 1000 \text{ litres/m}^3}{30 \text{ minutes} \times 60 \text{ seconds/minute}} \)

\[ = \frac{\text{litres}}{\text{seconds}} \]

OR

**b) Is between 4m³ - 6m³**

Flow meter reading = \( \frac{\text{volume in m}^3 \times 1000 \text{ litres/m}^3}{20 \text{ minutes} \times 60 \text{ seconds/minute}} \)

\[ = \frac{\text{litres}}{\text{seconds}} \]

OR

**c) Does not exceed 4m³**

Flow meter reading = \( \frac{\text{volume in m}^3 \times 1000 \text{ litres/m}^3}{15 \text{ minutes} \times 60 \text{ seconds/minute}} \)

\[ = \frac{\text{litres}}{\text{seconds}} \]

The flow meter reading is measured by a flow meter. The number calculated ensures that the turnover period is achieved.

**Draining the spa**

**How do I calculate when to drain the spa?**

Volume of spa = ______ litres

Number of users each day = the total number of users each day = ______

When to drain spa = \( \frac{\text{Volume}}{10 \times \text{Number of Users}} \)

\[ = \frac{\text{litres}}{10 \times \text{number of days between draining}} \]

This is the number of days before the tub needs to be drained.

For example:

If the spa volume = 1000 litres  
The number of users each day = 30  
Then 1000 litres = 1000 = 3 days  
\( \frac{10 \times 30}{300} \)

Therefore the tub needs to be drained every three days.

**Dissolved solids and make-up water**

Total dissolved solids are the total amount of dissolved material in the water, and can include organics material, minerals and salts, and pool chemicals. Evaporation of spa water and water removed from splashing will increase the level of total dissolved solids in the pool/spa which can represent a health hazard. High total dissolved solids can reduce the activity of pool/spa chemicals such as, disinfectants, algaecides and other chemicals, and contributes to turbidity (cloudiness) of the water.

To reduce the effects of total dissolved solids, a public spa operator must meet makeup water requirements. Refer to Appendix B for make up water meter information and other mechanical spa parts.

If the volume of the public spa is 4,000 litres of water or more each day you must:

- add 15 litres of make-up water for each bather
- add no more than 20 per cent of the total spa volume  
- have a make-up water meter to determine the amount of water added

Or

**Spa water replacement interval (SWRI)**

If the volume of the public spa is 4,000 litres of water or less you must:

1. Drain all the water to waste as per the calculations:  
   (see calculation section to determine frequency)

2. Inspect the spa including:
   a. drain covers
   b. suction fittings
   c. all emergency equipment

3. Ensure all parts are properly secured and in working condition

4. Refill the spa
Spa Chemistry

Test kits and reagents (Section 7)

It is important that you be able to measure and record:

- free available chlorine (FAC) or total bromine;
- total alkalinity
- total chlorine (TC); and
- pH

There are many types of test kits commercially available from a pool and spa supply company. In addition, service providers are also available to conduct tests and inspection. Always follow the manufacturer’s instructions and always use the correct manufacturer’s reagents with a kit; do not mix and match.

Required tests and inspections (Section 7)

All tests must be recorded daily and the operator should sign the records (see Appendix C for Sample record keeping logs). Records must be kept for a minimum of one year from the date of making the record and must be available for auditing by a Public Health Inspector. See the following tables for lists of required chemical tests and inspections.

Table A. Required chemical tests without ORP

<table>
<thead>
<tr>
<th>Frequency</th>
<th>Chemical test/inspection</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Daily 1/2 hour before opening and every 2 hours while open (When there is no ORP/automatic sensing device)</td>
<td>Free available chlorine (FAC)</td>
<td>5 - 10 mg/L</td>

<td>Not to exceed 40° C (104° F)</td>
</tr>
</tbody>
</table>

- take the water sample away from any jets
- submerge the comparator tub at least 18 inches from the water surface
- the manufacturer should provide detailed advice on the management of their spa

It is recommended that spa test reagents be replaced as per manufacturer’s recommendation (i.e. expiry date). Reagents lose their strength over time. Storing them in direct sunlight and in filter/equipment rooms where the conditions are warm and humid will ruin the reagents. Storing them in cold temperature (i.e. outdoor shed in winter) may destroy the reagents. Mixing various reagents from other kits will not provide accurate results either.
Oxidation reduction potential (ORP) (Section 7)

Oxidation reduction potential (ORP) measures the effectiveness of the spa sanitizer (i.e. chlorine or bromine) and its ability to destroy harmful organic matter, namely bacteria and viruses. ORP is measured on an automatic sensing device/controller. ORP value must be between 600-900 milli-volts (mV). Readings should be taken and recorded when sanitizer tests are taken. Refer to manufacturer instructions for proper installation and maintenance of measuring equipment to ensure an accurate ORP reading. See Appendix B - Spa parts for more information.

Table B. Required chemical tests with ORP

<table>
<thead>
<tr>
<th>Frequency</th>
<th>Chemical test/inspection</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>

Enforcement

Spa closure criteria

A Public Health Inspector has the authority under the Health Protection and Promotion Act (Section 13) to close a spa when an existing condition is identified that poses an immediate health threat or safety hazard. The public spa must be inaccessible to users when the spa is closed. The criteria for closure of a public spa can include:

- lack of water clarity
- fouling - faecal, vomit or chemical (visit the Centre for Disease Control and Prevention website at http://www.cdc.gov/healthywater/swimming for information on disinfection and remediation of spas)
- filtration or circulation system inoperative or malfunctioning
- no free available sanitizer
- outlet covers not secured properly
- failure of operator to demonstrate the suction vacuum relief system (SVRS) test competently or, the test itself fails
- emergency telephone missing or not working
- emergency stop button inoperable/malfunctioning
- audible and visual signal inoperable/malfunctioning
- ground fault circuit interrupter missing or malfunctioning
- spa temperature greater than 40°C (104°F)
- a swimming pool that has been closed and access to the spa is in the same room
- any other conditions that may constitute a health hazard

Fines

Public Health Inspectors can issue fines for non-compliance with the Public Pools Regulation ranging from $55 to $465. Fines can be greater for continued non-compliance.
Spa opening notification form
(Ontario Regulation 565, Section 5)

Date: ______________________________

Spa name: ____________________________________________________________

Site address: __________________________________________________________

Phone number: ________________________________________________________

Owner name: __________________________________________________________

Address: ________________________________

Phone number: ________________________________________________________

Designated operator name: _____________________________________________

Home address: _________________________________________________________

Home/cell phone number: _____________________________________________

Intended opening date (dd/mm/yyyy): _____________________________________

Building Permit number: _______________________________________________
   (applicable to construction or alteration)

Please note: A spa that has been closed more than four weeks or undergoes construction/alteration is required to provide opening notification. Spas that are newly constructed or altered may not open/reopen without written permission from the Medical Officer of Health.
The following table provides a list and description of mechanical parts that are typically found in public spas.

| Make-up water meter | • measures the amount of fresh water added to spa every day  
|                     | • fresh water prevents cyanuric acid build-up and dilutes swimmer pollutants  
|                     | • 15 L of fresh water per bather must be added to the spa daily (see page 10 for more information about make-up water and calculations) |

| Filter             | • removes dirt, debris and undissolved solids from the spa water  
|                    | • two types of filters: sand and diatomite  
|                    | • some water is wasted to make room for fresh water  
|                    | • filter is cleaned by backwashing |

| Flow meter         | • the rate of water flow  
|                    | • is used to calculate turnover period of the water |

| Pressure gauges    | • two gauges are located on top of the filter tank  
|                    | • one measures the amount of water flowing into the tank  
|                    | • the other measures how much flows out of the tank  
|                    | • when too much dirt collects in the filter medium, the water flow rate drops  
|                    | • the difference is indicated on the gauges; if you notice a difference between the gauges, consult or refer to the manufacturers’ directions as filters vary in backwashing and pressure requirements |

Table continued on next page
### Recirculation system
- A system that maintains circulation of water through a public spa by pumps, and that provides continuous treatment that includes filtration and chlorination or bromination and any other process that may be necessary for the treatment of the water.

### Suction system/vacuum release system
- Prevents high vacuum occurrences that cause human body or body part suction entrapment.
- Test according to manufacturer recommendations.
- **Please note:** This is one example of SVRS.
- Safety vacuum relief systems include a vacuum relief system, a vacuum limit system or engineered system; one of these systems must be equipped on the spa.

### Automatic sensing device
- Oxidation reduction potential (ORP).
- Measured in milli-volts (mV).
- Monitors the sanitizers ability to work.
- Maintaining the probe is critical for accuracy.
- Manual tests conducted ½ hour before opening and every 4 hours; need to reflect the device reading.

### Tamper-proof upper limit temperature cut-off switch
- Limits the temperature of the spa water to a maximum of 40°C (104°F).
- Switch is to be independent of the spa water’s temperature thermostat.
## Spa daily inspection records

To be inspected/tested 1/2 hour before opening

Date: ___________________________  Spa location: ___________________________

# Pool and spa incident report form

Date of report: 

Facility name: 

Date and time of incident: 

Location of incident: (check all that apply)
- [ ] outside pool grounds
- [ ] fence
- [ ] diving board
- [ ] other 

Location of incident: (check all that apply)
- [ ] dressing rooms
- [ ] pool
- [ ] wading pool
- [ ] pool/spa deck
- [ ] shallow end
- [ ] spa
- [ ] deep end
- [ ] water slide
- [ ] open lawn
- [ ] open lawn
- [ ] dressing rooms
- [ ] pool
- [ ] wading pool
- [ ] pool/spa deck
- [ ] shallow end
- [ ] spa
- [ ] deep end
- [ ] water slide
- [ ] open lawn

Name of person involved: ____________________________ Age: __________

Address: ____________________________________________

Phone number: __________________________________________

Details of incident (include activity at time of incident): ________________________________________________

Description of injuries (including exact location of body): ________________________________________________

Treatment or action taken by staff (include if treatment refused): ______________________________________________

Treatment given by emergency services (ambulance, police, fire etc.): ______________________________________

Emergency contacted/notified:  [ ] Yes  [ ] No

Environmental conditions: Water (temperature, visibility, etc.) ________________________________________________
  Air (temperature, wind, etc.) ________________________________________________
  Deck (condition etc.) ________________________________________________

Victim followed all rules and safety procedures:  [ ] Yes  [ ] No

Witness name: ____________________________ Age: __________

Address: ____________________________________________

Phone number: ____________________________________________

Name of staff involved: ____________________________

Name of person completing report: ____________________________
