25 November 2021

COVID-19 is a disease caused by a new virus called SARS-CoV-2. The virus is spread mainly through respiratory droplets when an infected person coughs or sneezes.

This vaccine is given to children aged 5 to 11 years. It is the same vaccine that is given to adults.

The vaccine is given as a series of two injections, with the second dose given at least 28 days after the first dose.

The vaccine is made up of the same ingredients as the vaccine for adults. It will not cause COVID-19 in children.
