

Mill Creek Road & Elgin Street North Watermain

Mill Creek Road: From Timber Creek Crescent to Samuelson Street

Samuelson Street: Mill Creek Road to Elgin Street North

Elgin Street North: Linnwood Avenue to Hilltop Drive

Region of Waterloo (City of Cambridge)

Class Environmental Assessment Study
Information Sheet for Schedule A+ Projects

Study/Project Scope (What & Why)

Mill Creek Road: The objective along Mill Creek Road from Timber Creek Crescent to Samuelson Street is to provide a new transmission main which will connect to the existing 300mm diameter transmission main at the intersection of Franklin Boulevard and Timber Creek Crescent to the intersection of Samuelson Street & Mill Creek Road. The transmission main is required to isolate the Shades Mill Water System (SMWS) from the proposed Cam 1A zone expansion, allowing the SMWS to continue operating as a source for the Cam 1 zone. In addition to the transmission main installation, the City of Cambridge has identified the existing 150mm distribution main and services as requiring replacement.

Elgin Street North: As part of the expanded Cam 1 / Cam 1A zone boundary, the boundary will be located along the middle of Elgin Street North, between Hilltop Drive and Linnwood Avenue; all properties on the west side of Elgin Street North will remain on Cam 1, and the properties on the east side will become part of the expanded Cam 1A. To solve the dead-end stagnation and to maintain service to the east side residents of Elgin Street North, an interconnect watermain is required between Hilltop Drive and Linnwood Avenue at Elgin Street North. A 250mm diameter watermain will be installed to provide serviceability/looping.

Preliminary Cost Estimate (Budget): \$3,000,000.00
