

Bridge Street Reconstruction
University Avenue to Woolwich Street
City of Waterloo and City of Kitchener

Class Environmental Assessment Study
Information Sheet for Schedule A+ Projects

Study/Project Scope (What & Why)

Due to the age and current condition of the pavement structure of Bridge Street, it is necessary to completely reconstruct the road. As part of the reconstruction, cycling and pedestrian facilities will be installed where none currently exist. Existing underground services including watermain and sanitary forcemain are over 50 years old and are subject to on-going maintenance and repair issues. This project consists of road reconstruction, intersection improvements, sanitary forcemain and watermain replacement and the construction of active transportation facilities. Construction is expected to be undertaken in 2022.

Preliminary Cost Estimate (Budget): \$3,700,000
