How to Dispose of Your Pet Waste

Managing Pet Waste Properly
If you receive our curbside green bin service, add pet waste (including animal droppings and kitty litter) to your green bin. To ensure the health and safety of your collection crews, pet waste must be properly wrapped.
- Wrap fully in newspaper or paper towelling, or place in a paper bag and place inside the green bin.
- Use certified compostable plastic bags which have at least one of the following logos:

Flush
Animal droppings can be scooped and flushed down the toilet. The Region’s wastewater treatment system is designed to treat this kind of waste.

Bury in your backyard
Animal droppings can be buried in your backyard using a digestor. Digestors are available at local stores and work similar to composters. However please:
- Contact your local municipal office regarding by-law restrictions on placement/proximity to property lines.
- Mix in layers of wood chips, sawdust or dried plant material to help reduce moisture and odours.

Within two years, the waste should be fully digested and the material may be spread on the lawn and gardens as a soil amendment, but the material should not be spread on or near vegetable gardens.

Double bag
Small amounts of animal droppings can be double-bagged in plastic bags and put out on regular collection day with garbage. Collection crews will leave behind improperly prepared garbage.

Flush Animal droppings can be scooped and flushed down the toilet. The Region’s wastewater treatment system is designed to treat this kind of waste.

Keep our neighbourhoods and parks clean and odour-free
When you are walking your pet, please do not put pet waste in neighbourhood garbage bins. This creates odours and fills up our landfill. Instead, simply bring along some certified compostable plastic pet waste bags. Collect droppings in these bags and just drop them in your green bin when you get home.
