

Services and funding for business

Waterloo Region relies on groundwater for drinking water. We can all play an important role to help our growing community keep a good supply of safe water.

Lower your water costs and protect your community's drinking water.

Request a water use review

On-site water use reviews are available at no cost. A great start to identify areas to reduce your water use and learn about funding available to complete the work.

Switch to water efficient fixtures

Replace your older showerheads and aerators with free water-saving fixtures. Restaurants and food processors can also receive free upgrades for pre-rinse spray valves.

Apply for financial support

Cost-sharing and rebates are available for projects that reduce your water use. We have funds for facility water audits, engineering consulting fees for water process upgrades and water sub-metering installations.

Rethink winter maintenance

Using too much salt or when not required can damage your property and our community's drinking water. We can help you protect your business from over-salting while maintaining winter safety.

Your water savings plan starts at www.regionofwaterloo.ca/WaterSmartBusiness
