How to read your water bill

1 Find the water section of your bill

2 View your total consumption

Your total consumption is your water use represented in cubic meters (m³). 1 m³ = 1000 litres of water.

3 Compare your consumption

To compare your household water use to the regional average, take your total consumption in cubic meters and divide by the number of people in your home. Divide this number by two to get your monthly water usage. Compare this number to the chart below.

Number of people in home	Average water use per month	
1 person	4.5 m ³	4,500 L
2 people	9 m ³	9,000 L
3 people	13.5 m ³	13,500 L
4 people	18 m ³	18,000 L
5 people	22.5 m ³	22,500 L

Monitor your consumption history for any abnormal jumps in water use. An increase in consumption may indicate:

- Change in water use behaviour
- Leaking toilet flapper
- Old or inefficient appliances
- Leaky faucet or valve
- Outdoor watering in the summer

Who to contact

Do you have more questions about your bill?
