What is this study all about?

The Region of Waterloo (Region) and local municipalities work together to supply clean and safe drinking water to residents. The Region is completing a Municipal Class Environmental Assessment (EA) Study to identify potential upgrades to improve water supply within the Cambridge and North Dumfries water system (Cambridge 3 pressure zone). The study will:

- Address the community’s long-term water supply needs (Blair Road Wells)
- Determine the requirements for a new water tower, including size and location
- Identify how to decommission the existing Inverness Water Tower if necessary (located on Dalkeith Drive)
- Determine if improvements are needed at the St. Andrews pumping station and tank site (located at St. Andrews Drive and Southwood Drive)
- Identify the need and potential location for new watermain upgrades

How is this study being done?

This study is a Schedule ‘B’ project in accordance with the Municipal Class Environmental Assessment (October 2000, as amended in 2007, 2011 and 2015), which is an approved process under the Ontario Environmental Assessment Act.

How can I participate in this study?

Residents are invited to attend a public consultation centre

The Region invites residents to a public consultation centre to learn more about the project, including:

- Water tower short listed areas
- Upgrade alternatives for the Blair Road Wells
- Presentation of evaluation criteria which will be used to select the preferred alternative
- Overview of the remaining study elements – St. Andrews pumping station and tank, Inverness Water Tower, and watermain upgrades
Notice of Public Consultation Centre No. 2
Regional Water System Upgrades in Cambridge and North Dumfries
Schedule ‘B’ Class Environmental Assessment

- The public consultation centre will be held:

<table>
<thead>
<tr>
<th>Date / Time:</th>
<th>April 1, 2019 – 5:00 p.m. to 7:00 p.m.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Location:</td>
<td>Cambridge City Hall</td>
</tr>
<tr>
