What is this study all about?

The Region of Waterloo (Region) and local municipalities work together to supply clean and safe drinking water to residents. The Region is completing a Municipal Class Environmental Assessment (EA) Study to identify potential upgrades to improve water supply within the Cambridge and North Dumfries water system (Cambridge 3 pressure zone).

The study has now completed the evaluation process and will present the preliminary recommendations for the following elements:

1. New water tower location
2. Water supply option
3. Improvements at the St. Andrews pumping station and tank site
4. Inverness Water Tower decommissioning
5. Watermain upgrades to support improved system performance and operation

How is this study being done?

This study is a Schedule ‘B’ project in accordance with the Municipal Class Environmental Assessment (October 2000, as amended in 2007, 2011 and 2015), which is an approved process under the Ontario Environmental Assessment Act.

How can I participate in this study?

Residents are invited to participate in a virtual public consultation centre
The Region invites residents to view the study’s evaluation results and preliminary preferred recommendations through a virtual public consultation centre. This is an opportunity to learn more about the project and submit comments to the Project Team.
Public Consultation Centre No. 3 will present the following:

- Preliminary preferred new water tower location
- Recommended water supply option
- Upgrades to support the preferred new water tower location and water supply option including:
  - St. Andrews pumping station and tank improvements, Inverness Water Tower decommissioning, and watermain upgrades

The virtual public consultation centre presentation, with video narration, will be available on the Region’s website starting December 9th, 2020. The slides and a transcript are available for download on the Region’s website. You may also complete a short survey on the website to provide comments.
