

## **Notice of Commencement of Detailed Design William Street and Strange Street Water Supply Systems Upgrades**

The Region of Waterloo (Region) has contracted Stantec Consulting Ltd. to undertake the detailed design and construction administration for the upgrades to the William Street and Strange Street Water Supply Systems (WSSs). These upgrades were recommended within the William Street and Strange Street Water Supply Systems Municipal Class Environmental Assessment (Class EA) completed in 2016 (XCG Consultants Ltd). The project will include the construction of a new water main from the William Street WSS along William Street, Herbert Street, John Street and the Iron Horse Trail (see attached map) to connect to the existing Strange Street Watermain at the intersection of Glasgow Street and Belmont Avenue West. A new water treatment plant will also be constructed at the Strange Street WSS site for the treatment of the water supply from both the William Street and Strange Street WSSs.

**What is the purpose of this project?** The works are being undertaken to improve the water quality within the William Street and Strange Street systems and to improve operations and maintenance costs.

**Field Surveys:** Field surveys will occur at the Strange Street site, William Street site, and along the watermain route over the next few months. Surveys will occur within the municipal right of way and may include topographic surveys, geotechnical investigations, utility locations, tree inventory, and cultural heritage reviews.

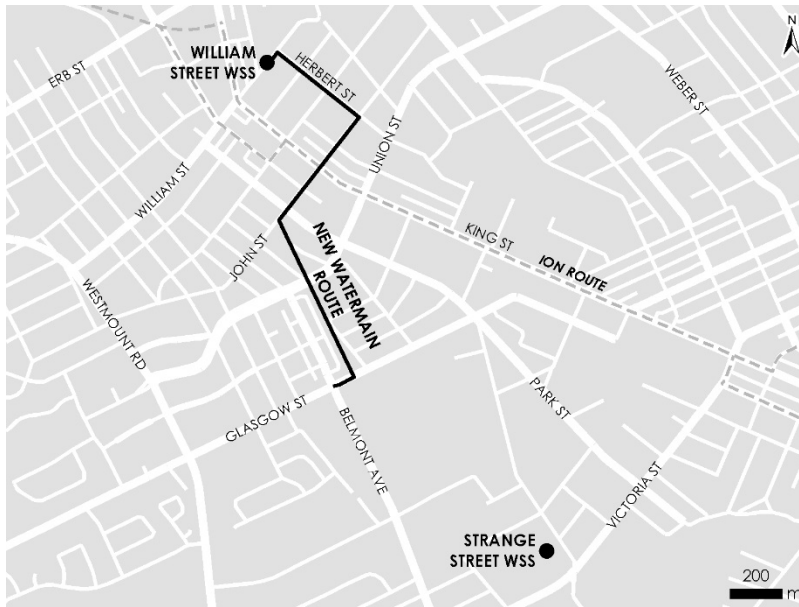

**How can I learn more?** The detailed design process follows upon the 2016 Municipal Class EA study and all input submitted has been carried forward to the next stage in the project. Three Public Information Centres (PICs) will be held throughout the project to provide opportunities to review the design as the project progresses. The first PIC will be scheduled in Spring 2018. The date, time, and location of the PICs will be advertised through a similar notice.

If you would like to provide comment, be added to the project's mailing list, or have any questions relating to the project, please contact a member of the study team below.
